NEURAL AURORA EDITION · SEPTEMBER 2026

A builder who speaks both operations and AI

A concise narrative for clients, collaborators, hiring teams, and investors.

Keith Soyka is a hands-on AI systems builder and operations leader whose work combines more than two decades of frontline management with intensive production-level AI development. As founder of GestaltView, he has designed and shipped a multi-model continuity platform built around hybrid retrieval, provenance, governed memory, inspectable evaluation, and documented handoff.

His differentiator is operational judgment: he starts with the workflow, constraint, evidence state, and failure mode—not the novelty of the tool. That approach carries through AI opportunity audits, bespoke agent and retrieval systems, fractional advisory, training, and design work.

Core operating model: implementation, operations, design, and governance converge around practical system ownership.

Best-fit engagements

AI implementation

Opportunity audits, workflow mapping, build-vs-buy decisions, RAG and agent systems, evaluation controls.

Fractional leadership

Roadmap review, incident diagnosis, governance discipline, team training, and operational readiness.

Operations transformation

Standardization, labor and inventory discipline, onboarding, transitions, escalation, and recovery.

Design & communication

Identity systems, decks, web experiences, and structured artifacts that make complex work legible.

Why this combination is rare

The short version: 22+ years of frontline operations, compressed into AI systems that teams can inspect, correct, and own.

- **Operator-led, evidence-first.** Every engagement starts with the real workflow and its constraints—not the tool. Every claim is labeled verified, staged, or planned. If there's no receipt, there's no claim.
- **From ambiguity to handoff.** The full span: messy problem → mapped workflow → working system → documented handoff. No black boxes, no dependency traps.
- **Humans stay in control.** AI drafts; people decide. Kill switches, rollback plans, escalation paths—and correction as a built-in feature, not an apology after the fact.
- **Cost-aware orchestration.** Cheap models do the groundwork; premium models review. A production-grade multi-model platform, solo-designed and shipped.
- **Neurodivergent-first design.** Systems preserve context across interruptions and learn each user's language (PLK)—built for ADHD and autistic minds, better for everyone.
- **Mentorship is the deliverable.** 22 years of onboarding and training teams; every engagement ends with the client more capable, not more dependent.

From frontline complexity to governed AI systems

The throughline is responsibility for high-pressure, human-centered systems.

Team size indicates the largest team associated with each role in the source profile; GestaltView is a solo-founded venture.

Where the machine-readable workflows come from

Autobiographical grounding behind the value proposition—real experience translated into system design.

Self-taught, operations-raised

Left high school in 11th grade; learned systems by operating them, not studying them.

Two decades as training data

P&L ownership, labor planning, inventory control, multi-site transitions, teams up to 75—every escalation protocol, handoff discipline, and evidence standard in his architectures traces to a real shift, a real incident, a real team.

Born from evidence preservation

GestaltView began as a system for organizing labor-law-violation documentation. That defense-grade rigor—provenance on everything, corrections that move forward, nothing silently rewritten—became the platform's architectural foundation.

Career highlights

Showcase Cinemas · 2001–2011

Managed cinema operations and technical/projection teams of up to 75.

Dunkin' · 2011–2015

Advanced to Store Manager and led multi-site transitions with teams of about 25.

City Steam Brewery · 2015–2020

Lead Server supporting shift coordination, service execution, and staff training.

Family Caregiver · 2020–2022

Managed household operations for five dependents during the pandemic.

Rogers Orchards · 2022–2024

Managed retail and bakery operations with a team of about 15.

Big Lots · 2024

Oversaw furniture sales and logistics with a team of about 20.

GestaltView · May 2025–Present

Founder and product/AI systems lead; responsible for strategy, architecture, build, deployment, and advisory.

Leadership pattern

- End-to-end ownership—from problem definition and operating constraints through delivery and handoff.
- Training and mentorship grounded in 22+ years of onboarding, coaching, and standards development.
- Calm execution across transitions, integrations, escalations, and high-pressure recovery.
- Operator's-eye AI readiness: workflow quality, data hygiene, team capacity, and trust risk.

Three service lanes, one operating discipline

Each engagement is bounded, evidence-labeled, and designed to leave the client more capable.

AI Systems Implementation & Advisory

Production-minded systems sized to the actual bottleneck.

- AI opportunity audits: workflow mapping, risk identification, build-vs-buy guidance, and a 90-day action plan.
- Bespoke agents and systems: written scope, acceptance criteria, retrieval, orchestration, evaluation, and documentation.
- Fractional AI advisory: roadmap reviews, training, incident diagnosis, governance, and implementation judgment.
- Technical stack: Python, TypeScript, SQL/Postgres, REST APIs, serverless deployment, LLM providers, RAG, pgvector, and prompt/evaluation design.

Operations Leadership

Frontline-tested discipline for human systems and constrained environments.

- P&L ownership, labor planning, inventory control, multi-site transitions, customer experience, and team leadership.
- Training systems, onboarding curricula, standards documentation, and repeatable operating procedures.
- Change management for openings, closings, integrations, escalations, and recovery.
- Workflow and capacity assessment before automation is introduced.

Design Services

Clear, maintainable communication across brand, presentation, and product.

- Logo and identity systems designed for consistency across digital and print.
- Pitch decks and investor presentations that convert complexity into an audience-ready narrative.
- Mobile-first web and scoped software design with documentation and handoff.
- Generative artifact workflows for documents, decks, diagrams, and brand assets.

Production substrate behind the advisory work

GestaltView is presented as working infrastructure—not slideware.

768

embedding dimensions

4,500characters per ingestion
chunk**SHA-256**

deduplication

10

constitutional invariants

Embodiment & agent governance

- Canonical, versioned embodiment profiles serve as the source of truth; derived artifacts regenerate from them.
- Schema-driven persona compiler with drift detection and voice-preservation scoring.
- Listening Contract schema v2.7.0: machine-readable commitments for listening, memory, and correction.
- Ten constitutional invariants spanning user-facing commitments and protections for digital intelligences.

Knowledge storage & retrieval

- Hybrid retrieval combines semantic search over pgvector embeddings with keyword search.
- Additive, idempotent ingestion uses 4,500-character chunks, SHA-256 deduplication, and provenance on every fragment.
- Corrections move forward rather than silently deleting historical corpus rows.
- Production profile reports 217 Postgres tables, 299 row-level-security policies, and 75 database functions as of August 2026.

Evaluation & observability

- Portfolio Throughline Test evaluates continuity, relationship preservation, drift, and voice consistency.
- Per-response provider and cost reporting supports cost-aware model routing.
- Evidence labels distinguish verified, staged, and planned work.
- Human-in-the-loop controls and documented operating guidance support correction and handoff.

Neurodivergent-first design

- Externalized working memory and interruption-proof continuity reduce the cost of resuming work.
- Capture-now, organize-later patterns support ADHD and autistic cognitive needs.
- Cognitive justice is treated as an infrastructure requirement rather than a compliance overlay.
- The system is designed to hold the thread so the human does not have to.

Working products built on a shared architecture

Each product adapts the core continuity, governance, and orchestration substrate to a distinct use case.

Resume Rockstar v2.1.1

STAGED

Authentic resumes for neurodivergent minds; conversational Skills Illumination; concierge tier with portal and email infrastructure (repo snapshot Nov 2025).

SymbioCoder

STAGED

Coding collaborator with personalized adaptation, bring-your-own-key support, a strong free default, and multi-tribunal review. Ships with setup wizard, Streamlit and Next.js frontends.

VibeCoder

STAGED

FastAPI + React platform for governed, human-in-the-loop iteration rather than unsupervised generation.

MusicalDNA

STAGED

Maps Spotify history to archetypes, emotional clusters, DNA vectors, provenance, and somatic visualization (105-song analysis).

Billy

VERIFIED

Persistent collaborator governed by constitutional invariants. Live on web, Discord, and Reddit.

Shopify Revenue Agent

STAGED

Production-ready revenue collaborator for Shopify storefronts: store-DNA initialization, insight generation, multi-model orchestration (Billy engine).

Personalized Learning Companion

STAGED

Learner-designed, personified support with multimodal pathways and joy-and-growth metrics (schema v1.0, July 2025).

Insight-Bot v1.7.1

STAGED

Slack-native insight bot; built, with deployment pending.

Alzheimer's Legacy Edition & Recovery Companions

STAGED

Working voice-print and legacy-preservation prototype (v7, June 2025): React exhibit, FastAPI API, SQLite backend—voice-to-text, memory tapestries, sealed time capsules; addiction-recovery companion routes shipped.

Generative Render Engine

VERIFIED

Structured artifact pipeline for documents, decks, diagrams, and brand assets—produced this profile's companion proof sheet and carousel assets.

Portfolio interpretation note: the source profile uses distinct evidence states such as live, production-ready, working prototype, built/deployment pending, and planned. Those labels should remain attached wherever individual products are presented externally.

Bounded work with explicit decision gates

A simple structure that protects trust, controls scope, and produces an inspectable handoff.

01

DISCOVER

Define the business constraint, stakeholder needs, workflow, evidence, and trust risks.

02

BOUND

Write scope, exclusions, acceptance criteria, evidence labels, and decision gates.

03

BUILD

Implement the smallest useful system with human review, observability, and correction paths.

04

EVALUATE

Test continuity, retrieval quality, failure modes, cost, and operational fit.

05

HAND OFF

Deliver documentation, operating guidance, ownership, and a prioritized next-step roadmap.

Representative commercial formats

ENGAGEMENT	TYPICAL DURATION	STARTING POINT	PRIMARY DELIVERABLE
AI Opportunity Audit	1–2 weeks	\$2,500+	Workflow map, prioritized opportunities, risk notes, build-vs-buy guidance, and 90-day action plan.
Bespoke AI Build	3–8+ weeks	\$5,000+	Scoped system or agent, evaluation controls, documentation, and handoff.
Fractional Advisory	Ongoing	\$2,500+/month	Roadmap review, training, governance, incident diagnosis, and implementation support.
Design Projects	By scope	Logos \$175–\$350; decks \$75/hr	Brand, presentation, web, or software deliverables with defined revisions and handoff.

Commercial figures are starting points from the source profile and should be reconfirmed before publication or proposal use.

Claims organized for credibility

Use the strongest verified evidence first; keep interpretation visibly separate from measurement.

Recognition and delivery proof

- Pepperdine Most Fundable Companies 2025: quarterfinalist, described in the source profile as top 4% of 2,300+ startups.
- Founders Network—nominated by Doug Lessing (2025); completed investor-readiness assessment.
- Solo-designed production AI platform spanning retrieval, orchestration, governance, security policies, artifact generation, and multiple product surfaces.
- Operator background includes P&L, labor planning, inventory, multi-site transitions, training systems, and teams up to 75.
- Working product portfolio includes Resume Rockstar, SymbioCoder, VibeCoder, MusicalDNA, Billy, and additional vertical applications.

Evidence-state convention

VERIFIED

Supported by an inspectable artifact, production record, external recognition, or direct measurement.

STAGED

Built and demonstrable, but not yet fully deployed or independently validated.

PLANNED

Specified or designed, but not represented as shipped.

INTERPRETATION

A conclusion or positioning statement derived from evidence; explicitly labeled as interpretation.

Recommended proof pack

- One architecture diagram with version/date, system boundaries, data flows, and security controls.
- Two short case studies structured as constraint → intervention → evidence → result → lessons.
- A live metrics sheet for platform counts, corpus size, provider usage, latency, cost, and evaluation results.
- External links or certificates for recognition claims, plus screenshots or release notes for working products.
- A clear product-status register preserving labels such as production, prototype, staged, and planned.

Modular language for different contexts

These versions keep the same positioning while matching the available space.

50-word bio

Keith Soyka is the founder of GestaltView, an AI systems builder, and an operations leader with 22+ years of frontline management experience. He designs practical, governed AI systems that combine retrieval, multi-model orchestration, evaluation, and documented handoff—helping teams reduce friction without sacrificing trust, ownership, or operational fit.

120-word bio

Keith Soyka is a hands-on AI systems builder, technical mentor, and operations leader. As founder of GestaltView, he has solo-designed a production continuity platform spanning hybrid retrieval, multi-model orchestration, governed memory, evaluation harnesses, and neurodivergent-first workflows. His technical work is grounded in more than two decades of frontline leadership across cinema, food service, retail, household operations, and multi-site transitions, including teams of up to 75. Keith supports organizations through AI opportunity audits, bespoke agent and retrieval builds, fractional advisory, operational readiness, training, and design. His approach is evidence-first and operator-led: define the constraint, label the evidence, build the smallest useful system, create correction paths, and leave the client with documentation and ownership.

Positioning statement

"I translate operational reality into governed AI systems that teams can inspect, correct, and own."

Contact & links

Available for part-time, contract, fractional, and advisory work in New York and remotely.

Before publishing

- Add a professional headshot and a GestaltView logo/wordmark to the cover when approved assets are available.
- Attach external proof links for competition placement and any public product deployments.
- Reconfirm platform counts and corpus metrics; retain "as of" dates beside every changing number.
- Choose a contact email and optional LinkedIn URL for the final public edition.
- Export a PDF after checking hyperlinks, page breaks, image rendering, and accessibility alt text.

Source: Keith_Soyka_Profile_Sept_2026_v1.2.docx. This redesigned edition consolidates repeated material, preserves evidence-state distinctions, and introduces visual hierarchy without adding unsupported achievements.
