SAMPLE — FICTIONAL CLIENT, ILLUSTRATIVE ONLY — LOS POLLOS HERMANOS IS FICTIONAL

PHASE 2a DELIVERABLE · SAMPLE

Implementation Spec

"It's the chicken, man." — tagline invented for this sample

Fictional client: **Los Pollos Hermanos** (fictional fried-chicken chain, as seen on TV)
Scope: **4-page marketing site** — Home · Menu · Locations · Contact
Prepared: October 2026 · Spec version 1.0 · Built from the fictional client brief only

1 · Scope Summary

This spec describes the Phase-2a implementation plan for a **4-page static marketing site** for the fictional Los Pollos Hermanos franchise group. The site supports the two fictional engagement goals: driving **catering quote requests** and **franchise inquiries**, while letting a non-technical manager update menu items and locations without rebuilding the site.

Page	File	Primary job
Home	`index.html`	First impression; brand sell; route visitors to Menu, Locations, Contact
Menu	`menu.html`	Scannable food listing with prices (all fictional), allergen note
Locations	`locations.html`	Find-us cards for 3 fictional locations + "coming soon" notice
Contact	`contact.html`	Catering quote form → fictional inbox; franchise inquiry block; 4-question FAQ

> **Static by design.** No server, no database, no CMS backend. The site is HTML + CSS + a small JS file, editable in plainly-marked regions. Fast on phones, cheap to host, nothing to patch at 3am.

2 · Phased Build Plan

The build runs in five phases, each ending in something the client can see and approve before the next begins.

PHASE 1 — SETUP & TOKENS

- Scaffold project: 4 HTML files, `styles.css`, `script.js`, `assets/` for SVG illustration.
- Encode the **full token set** from brief §5 as CSS custom properties (`:root` block). Zero hardcoded hex colors anywhere else.
- Set type scale: Oswald headings, Inter body, Caveat for taglines only; system stacks as the live fallback.
- Define shared shells: sticky header component, footer component, SAMPLE banner ribbon.

PHASE 2 — PAGES & CONTENT

- **Home:** red sunburst hero with invented tagline, dual CTA (View Menu / Request Catering), 3 value props (family recipe · immaculate dining rooms · catering), featured menu teaser, locations teaser.
- **Menu:** 3 category cards (Chicken · Sides · Drinks & Desserts) with all fictional prices; allergen note.
- **Locations:** 3 fictional location cards — Albuquerque NM (Central Ave — Flagship), Santa Fe NM, El Paso TX — each with fictional address, Mon–Sun 10am–10pm hours, phone, "Get directions" link; "New location coming: Tucson AZ" notice.
- **Contact:** catering quote form (name, email, event date, guests, message), franchise inquiry block (separate email link), 4-question FAQ (catering minimums, franchise info, allergens, hours).

PHASE 3 — COMPONENTS & INTERACTION

- Header: sticky, red, logo badge + nav + "Order Catering" CTA pill button.
- Contact form: labels above inputs, inline validation (JS), friendly error/success states; submits to the fictional inbox (no real backend in the sample).
- FAQ accordion: keyboard-operable, expands/collapses with aria attributes.
- Stripe/sunburst CSS motifs, illustrated chicken badge, stripe dividers — CSS/SVG only, no photos.

PHASE 4 — QA & ACCESSIBILITY

- Layout verified at **360px** and **1280px**; no horizontal scroll anywhere.
- WCAG 2.1 AA contrast checked on every text/background pairing in the token set.
- Keyboard navigation: nav, accordion, form all reachable and operable without a mouse; visible focus styles.
- Spellcheck, link check, and a mobile load pass (imagery is CSS/SVG, so pages stay light).

PHASE 5 — HANDOFF

- Editable regions clearly marked in the code (see §4) so a non-technical manager can find them.
- Provenance envelope line on every file: `© 2026 Keith Soyka / GestaltView · SAMPLE`.
- Handoff walkthrough + the §7 checklist signed off with the client.

3 · Per-Page Build Notes

3.1 Home — `index.html`

- **Hero:** `--lph-red` sunburst background (CSS repeating gradient), invented tagline *"It's the chicken, man."*, dual CTA buttons — red pill on cream, yellow pill on red.
- **Value-prop trio:** three cards — family recipe, immaculate dining rooms, catering.
- **Teasers:** featured-menu row (3 top sellers, prices fictional) and locations teaser strip linking to full pages.
- **CTA:** catering band routing to `contact.html`.

3.2 Menu — `menu.html`

Category	Items (all prices fictional)
Chicken	8 pc. Famous Recipe **$14.99** · Tenders **$9.99** · Sandwich **$8.49**
Sides	Curly Fries **$3.99** · Slaw **$2.99** · Corn **$2.49**
Drinks & Desserts	Horchata **$2.99** · Flan **$4.49**

- Each category renders as a card (12px radius, `--lph-brown` at 12% border, soft shadow).
- **Allergen note** block below the categories (copy to be supplied at Phase 2 review).
- Menu items live in a **marked editable region** — each item is one self-contained line a manager can copy/edit.

3.3 Locations — `locations.html`

Location (fictional)	Card contents
Albuquerque NM — Central Ave (Flagship)	Fictional address · Mon–Sun 10am–10pm · phone · "Get directions" link
Santa Fe NM	Fictional address · Mon–Sun 10am–10pm · phone · "Get directions" link

Location (fictional)	Card contents
El Paso TX	Fictional address · Mon–Sun 10am–10pm · phone · "Get directions" link

- **"New location coming: Tucson AZ"** notice banner above the cards.
- Location cards live in a **marked editable region** — adding Tucson is: copy one card block, change the fields.

3.4 Contact — `contact.html`

- **Catering quote form** fields: name, email, event date, guests, message → fictional inbox.
- Labels above inputs; inline validation with clear error text; keyboard-friendly tab order.
- **Franchise inquiry block:** separate email link, visually distinct from the catering form.
- **FAQ accordion** (4 questions, per brief): catering minimums · franchise info · allergens · hours.

4 · Technical Approach

4.1 Stack

Plain **static HTML + CSS + one small JS file**. No framework, no build step, no server. Rationale: the brief demands speed on mobile, near-zero hosting cost, and maintainability by a non-technical manager — a static site meets all three; anything heavier would be over-engineering.

4.2 Token-driven CSS

All six LPH colors live as CSS custom properties in one `:root` block (`--lph-red`, `--lph-yellow`, `--lph-cream`, `--lph-brown`, `--lph-orange`, `--lph-red-dark`). No hex values outside that block — so a rebrand is a six-line change. Spacing uses the 8px base unit; buttons are pill radius (999px); cards are 12px radius.

4.3 Editable regions

Menu items and locations are wrapped in plainly-marked HTML comments a non-technical manager can find, e.g.:

```
<!-- ★ EDITABLE: MENU ITEMS — copy a block to add one ★ -->
<!-- ★ EDITABLE: LOCATIONS — copy a card to add one ★ -->
```

Each menu item and each location card is one self-contained, copy-pasteable block. The handoff walkthrough opens the file in a text editor and demonstrates an actual edit.

4.4 Imagery

No photos anywhere — brand is carried by CSS/SVG illustration (sunburst hero, chicken badge, stripe dividers) per the brief. This also keeps mobile load times trivial.

4.5 Accessibility baseline

WCAG 2.1 AA contrast on all text pairings; semantic HTML landmarks; keyboard-navigable nav, accordion, and form; visible focus indicators; English copy only.

5 · Acceptance Criteria (brief §7)

"Done" means all six of these hold. Each is verified before handoff.

#	Criterion	How it's verified
1	All 4 pages render from the token set — no hardcoded colors outside tokens.	Code review: grep the CSS for hex values outside the `:root` block.
2	Mobile (360px) and desktop (1280px) layouts verified; no horizontal scroll.	Manual device-width test on both viewports; scroll check per page.
3	Contrast AA on all text. Keyboard-navigable nav and form.	Contrast checker pass on token pairings; keyboard-only walkthrough of nav, accordion, form.
4	Menu items and locations editable in marked regions a non-technical manager can find.	Live demo: manager locates the markers and makes a real edit during handoff.
5	Every file carries the provenance envelope line.	Check each delivered file for `© 2026 Keith Soyka / GestaltView · SAMPLE`.
6	No real business data anywhere; SAMPLE banner visible on every page.	Content audit against the fictional brief; banner present on all 4 pages.

6 · Exclusions — What Is NOT Included

Per brief §3, the following are **out of scope**, stated plainly so there are no surprises:

- **No online ordering.** No cart, no checkout, no order tracking.
- **No payments.** No card processing, no invoices.
- **No accounts.** No sign-up, no logins, no member areas.
- **No real photography** — illustration and typography carry the brand.
- **English copy only**; no multilingual versions in this phase.
- **4 pages only.** Additional pages (blog, careers, press) are a future phase.

> **What happens instead:** the catering form collects quote requests and routes them to the fictional inbox — that is the conversion path. Ordering and payments can be scoped as a separate engagement later.

7 · Timeline & Milestones

Indicative schedule for the fictional engagement — weeks start at kickoff (K).

Milestone	Phase	Timing	Client sees
M1 **Tokens & shells approved**	1	K + 1 wk	Style tile: palette, type, header/footer shells in the LPH theme
M2 **All 4 pages drafted**	2	K + 2 wk	Clickable draft of every page with fictional copy
M3 **Components live**	3	K + 3 wk	Working form validation, FAQ accordion, responsive nav
M4 **QA sign-off**	4	K + 4 wk	Accessibility + viewport report against the §5 criteria
M5 **Handoff complete**	5	K + 5 wk	Files delivered, edit demo done, checklist signed

Each milestone gates the next: no phase begins until the client approves the previous milestone's review.

8 · Handoff Checklist

Completed together with the client at the Phase 5 handoff meeting.

- ☐ All 4 HTML pages delivered, rendering in the LPH theme from tokens only (criterion 1).
- ☐ 360px and 1280px layouts verified; no horizontal scroll (criterion 2).
- ☐ AA contrast verified; keyboard walkthrough of nav, accordion, and form completed (criterion 3).
- ☐ Editable regions demonstrated: manager locates the menu markers and makes a live edit (criterion 4).
- ☐ Provenance envelope line present in every delivered file (criterion 5).
- ☐ SAMPLE banner visible on every page; content audit confirms no real business data (criterion 6).
- ☐ Exclusions reviewed with client — ordering, payments, accounts confirmed out of scope.
- ☐ Client knows the catering-form destination (fictional inbox) and the franchise inquiry email.
- ☐ Future-phase notes captured (extra pages, multilingual copy, ordering) — not promised, just noted.
